

Automatic VR: weights of  $\hat{\rho}(i)$ 

Chow-Denning: a stricter critical value

—●— quadratic spectral weights  $w(i/k)$ ,  $k = 5$

—●— quadratic spectral weights  $w(i/k)$ ,  $k = 12$

—●— CD 5% critical value  $c$ :  $(2\Phi(c) - 1)^m = 0.95$
